

# Standex | Smart.

Measures up... down... sideways.

Standex manufactures fluid level sensors using magnetic and conductive sensing technology to best suit customer requirements. Our unique designs are helping companies to gain competitive market advantages. Our conductive fluid level sensors have false full protection and current level shift to indicate fluid level. Custom molding capabilities allow us to design and build float and sensors to suit any fluid level sensing application. That's one reason why we're the partner of choice for automotive fluid sensing projects.

That's **Standex** | Smart.
